

Your online security is a high priority for us. That is why we are committed to safeguarding your personal information online to keep it secure and confidential.

When you sign in to My Account, your Customer ID and Password are sent over the Internet from your computer to ours using Secure Socket Layer (SSL) technology. SSL encrypts your personal information **before** it leaves your computer, ensuring that no one else can read it.

Once you have signed in, you can check that your session is secure in two ways:

- Look for the small **padlock** icon usually located in the lower right corner of your Web browser window. A closed, or locked, padlock indicates a secure connection. 
- Look for the letters "**https://**" at the beginning of the Web site address or URL in your Web browser. The "s" means secure.

My Account automatically logs out an end user after a certain period of time in order to protect personal information from onlookers.

My Account is secured using a True BusinessID Certificate from Geotrust. This ensures that all information you send to us via the World Wide Web will be encrypted through 128-bit SSL Security. The True Site trust mark provides third-party website identity validation. Please click on the Geotrust True Site image which will verify the validity of our Geotrust certificate, and our commitment to your security.
